- MS Exchange - \$79.99/year
- MS SQL/Exchange - \$109.99/year

\*Pricing includes only cost for software licenses. Storage cost is charged by AWS.

"Contango IT evaluated several online backup solutions, but chose CloudBerry Managed Backup because it worked and for its technology, functionality and ability to store data on Amazon S3."

**Danny Mizrahi,**  
CEO at Contango IT

Leverage CloudBerry to start providing cloud backup service under your own brand. CloudBerry Managed Backup Service (MBS) is built for Amazon Web Services (AWS) and designed to meet the needs of local service providers, offering reliable backup to their customers.

### ✓ Powerful cloud backup for Amazon Web Services

Leverage Amazon to scale your business, get more revenue and customers. You can grow your backup business as you go without upfront investments.

### ✓ New service under your brand

CloudBerry lets you completely rebrand the MBS service and sell it under your name. You invest in your own brand, make more money on the additional service and get happy customers. It only takes 15 minutes to get started!

### ✓ Full visibility and simple management

Control everything from a web panel, which comes with a set of tools to remotely assist your customers during initial backup setup, as well as to provide ongoing support.

## How it works:

You control all backups through the CloudBerry Managed Backup Service console, which is hosted on CloudBerry Lab's server (Amazon EC2). After the client component is installed on the user end, you'll see backups on the control panel and have full access to backup management functions.
