

CloudBerry

Managed Backup Service

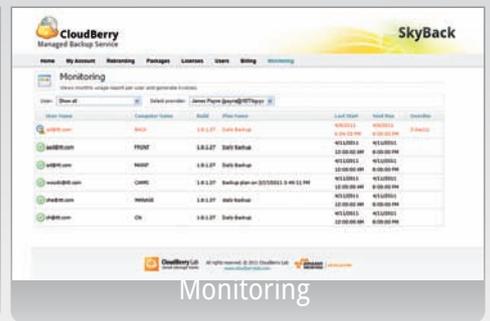

White-label versions of CloudBerry Backup is available to our partners via the CloudBerry Lab Partner Program. This program allows you to offer managed online backup services under your own brand that are powered by the CloudBerry Backup software and Amazon S3 secure cloud storage.

While the personal version of CloudBerry Backup requires users to sign up with Amazon directly, the Partner program will allow you to store all customer

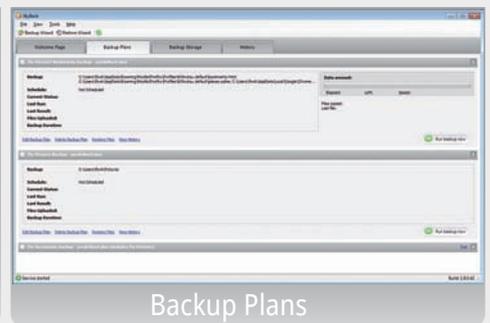

data under a single centrally managed S3 account and provide your customers with individual accounts that are managed and billed directly by you.

The Partner Program provides client functionality that is essentially identical to the CloudBerry Backup, with options for additional functionality or customization of the client available under the Private Label option.

	\$99.99 /year

- Each license can be installed on one computer
- License fee is annual. You have to renew the licenses in one year
- During this period you will get free upgrades and email support

- It is up to you how many users you want to support. if you have 10 license pack you can have 2 active users with 5 computers each or 10 users with 1 computer each
- Minimum purchase is 10 license pack. We don't sell 1 license.

***Server pricing is not offered yet. Early adopters can benefit from desktop pricing which covers server version too.**

TECHNICAL SUMMARY

CloudBerry Managed Backup Service works as a web service running on Amazon EC2. User connects to a Managed Backup Service endpoint rather than to Amazon S3 directly. Managed Backup comes with a control panel that offers user management. MBS authenticates each user requests, but never sees the actual data. The data is encrypted by user managed keys.

INTEGRATION OPTIONS / API

You can integrate CloudBerry Backup with your own applications. CloudBerry Backup can run as a service on user computers and you can control it using your own tools/UI. There are two integration options available:

- Command Line interface
- C# API - currently only backup plan statistics retrieval is supported. However, we are going to extend it with other methods in the future
- XML RPC API for PHP developers

We would love to hear your own integration requirements and we will try to adjust accordingly

CONSIDER CLOUDBERRY MANAGED BACKUP SERVICE IF YOU NEED:

- Offer an additional innovative low cost service to your customers
- Create additional revenue stream with little investment
- Assist your customers in configuring the initial backup
- Continuously monitor of the backup processes on the client machines to ensure that backups actually

SYSTEM REQUIREMENTS:

Windows XP/2003/Vista/2008/7/8/2012 (32 and 64 bit)

Microsoft .NET Framework 4.0

Amazon S3
